

EXPERTS ARE SHEDDING LIGHT ON THE NEED FOR OUR NEW TRANSMISSION LINE.

IF WE IGNORE THEIR ADVICE,
BLACKOUTS WILL LEAVE MANY AREA
BUSINESSES AND HOMES IN THE DARK
WITHIN THE NEXT FOUR YEARS.

Our country's top energy experts have called for new transmission lines to be built to prevent looming power problems. The **U.S. Department of Energy**, the **North American Electric Reliability Corporation** and **PJM Interconnection**, the organization responsible for ensuring our region's power remains reliable, all agree something must be done now.

Access to affordable, reliable power creates jobs and opportunity. At Allegheny, it is our responsibility to provide our customers with reliable electric power. It is a responsibility we take seriously. But if the Trans-Allegheny Interstate Line (TrAIL) is not built, our area could suffer significant power outages and blackouts by 2011.

We support energy conservation. We're working to help consumers become more energy efficient. But conservation and efficiency programs alone are not enough to meet the challenges we face. We need the new TrAIL line to ensure reliable power.
